

We've made the Ultra-Aire™ DEH 3000 Digital Controller even better!

Updated software to better protect the home in case of a power loss.

Time and date display easier to read.

Print easier to read in low-light environments.

The Updated DEH 3000 Controller

Therma-Stor® has updated the DEH3000 controller for the Ultra-Aire brand of whole house ventilating dehumidifiers. These changes include:

Power-loss program back-up

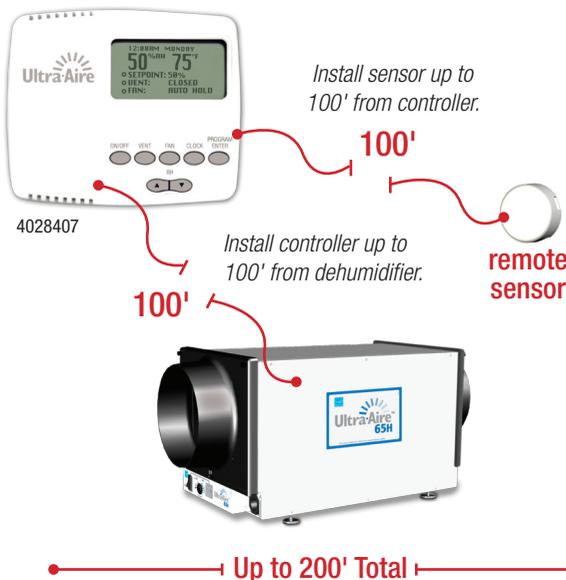

■ After a power loss, the most recent program set in the controller will reset to Monday 12:00 am as soon as power is restored. The Ultra-Aire dehumidifier will resume operation with the prior program settings, ensuring the unit will operate as soon as possible. All that is required is to reset the controller to the correct time, and it is good to go.

Enhanced Display

■ We've modified the display to make time/day/date visible on the top of the screen, simplifying the process of verifying the controller is programmed as desired.

Improved Control Button Labeling

■ Based on your feedback, we have changed the print color on the face of the controller to make the DEH 3000 easier to read and operate – especially in low-light environments.

The New DEH 3000R Controller with Remote Sensor

Therma-Stor is introducing the new DEH 3000R – remote sensor equipped controller for the Ultra-Aire brand of whole house ventilating dehumidifiers. The DEH3000R provides the installation flexibility that contractors and consumers have been asking for. These benefits include:

- Updated functionality of the DEH 3000 controller.
- Ability to install the controller up to 100' from the dehumidifier, and the humidity sensor 100' from the controller.
- Compact-sized sensor can be installed virtually anywhere, and can be painted to match its environment.

The DEH 3000R includes the updated the DEH 3000 digital controller, remote sensor and 8 splice connectors.

Both the DEH 3000 and the new DEH 3000R will be available July 15, 2008.
